HYDRAULICS & PNEUMATICS 1978 EDITORIAL INDEX

Out-of-print copies are available in complete volumes as positive microfilm copies from University Microfilms, 300 N. Zeeb Rd., Ann Arbor, MI 48103.

Aerospace equipment

Computer controlled hydraulic system tests Space Shuttle's Orbiter, W. R. Sage and R. A. Meyer, **Dec 47**

Cushioned hydraulic cylinders simulate space shuttle launch, L. Boni, **May 69**

Basic technology

Air valve manifolds, R. T. Schneider, **Nov 72**

Beware of resonance, J. Wajcfeld, **Feb 62**

Can fiber optics beam in on fluid power?, T. Goldoftas, **Apr 58**

Closed-end spring check valve, R. T. Burton, G. J. Schoenau, and P. R. Ukrainetz, **Sep I-14**

Control circuit monitoring, P. Rohner, **May, I-18**

Damping high-pressure low-flow energy instantaneously, M. I. Korytko, **Apr 55**

Designing logic circuit with Karnaugh maps, S. C. Tsai, **Jul I-12**

Electric motors for fluid power,
- Part 6: operating parameters and NEMA standards, D. Elkins, **Sep 92**

Electronic controls for fluid power, D. C. Clark, **Jun 70**

Filters for profit-making designs, a staff report, **Mar HP-1**
- Pneumatic filtration, **Mar HP-3**
- Hydraulic filtration, **Mar HP-10**

Filters, hydraulic, quick guide to product selection, **Jan 157**

Fire resistant hydraulic fluids: new capabilities expand applications, A. R. Protheroe, **May 73**

Fluid diodes for fluid power control, K. Chithrabhanu, **Mar I-15**

HPUs: hydraulic power—when, where, and as much as you need, E. Jacobs, **Sep 82**

Heat exchangers can keep it cool, N. R. Stull, **Jul 70**

How to choose an in-plant oil reclamation system, B. Dinius, **Jul 62**

How to design a pneumatic system, E. A. Ulvila, **Oct 160**

How to detect and prevent hydraulic fluid cavitation, G. R. Jordan, **Oct 108**

How to tie down a traveling tube, S. O. Martin, **Feb 58**

Hydraulic oil tests you should know, H. W. McCulloch, Jr., **Feb 55**

Liquid-cooled rotary screw air compressors, H. P. Van Ormer, Jr.
- Part 1, evolution, innovations, developments, **Feb 64**
- Part 2, evolution, innovations, developments, continued, **Apr 68**
- Part 3, types of capacity control, **May 85**
- Par 4: performance of rotary screw vs reciprocating types, **Oct 170**

Pilot pressure related controls of improved system designs, G. Scott
- Part 1, **Oct 155**
- Part 2, **Nov 69**

Practical oil reclamation, purification, J. Chomsky and D. Kuhn, **Apr 71**

Preferred numbers, **Feb 10**

Putting a stop to hydraulic power, E. S. Orzel and G. M. Scheffel, **Oct 165**

Save energy by considering hydraulic circuit efficiency, Z. J. Lansky and R. A. Olszewski, **Sep 88**

Versatile HST controls custom fit drives to your application, E. Jacobs,
- Part 1, **Jun 58**
- Part 2, **Jul 65**
- Part 3, **Aug 86**
- Part 4, **Sep 95**

View from the field—heat and heat transfer quantity designations, **Sep 98**

View from the field—mass, force, and weight: a review of the fundamental relationships, with special consideration of SI, **Oct 216**

Worth repeating—designing with fluid power: present conditions, and future challenges and opportunities, R. S. Frank,
- Part 1, **Jan 244**
- Part 2, **Mar 126**

Worth repeating—practical design considerations for hydraulic drives, R. Nielson
- Part 1, **Jul 108**
- Part 2, **Aug 112**
- Part 3, **Sep 116**
- Part 4, **Oct 194**

Books, education, and training

Fundamentals of fluid power, book review, **May 138**

German-English science dictionary, book review, **Oct 230**

Hydraulic mechanisms in automation, book review, **Mar 146**

Marks' standard handbook for mechanical engineers-8th edition, **Oct 230**

Metric units for fluid power applications
- Part 1, **Aug 114**
- Part 2, **Sep 120**
- Part 3, **Oct 222**
- Part 4, **Nov 94**

Pressure vessels: the ASME code simplified, fifth edition, book review, **Mar 146**

Save energy by considering hydraulic circuit efficiency, Z. J. Lansky and R. A. Olszewski, **Sep 88**

View from the field—heat and heat transfer quantity designations, **Sep 98**

View from the field-mass, force, and weight—A review of the fundamental relationships, with special consideration of SI, **Oct 216**

What's available in fluid power education, T. Goldoftas, **Aug 80**

World metric standards for engineers, book review, **Nov 96**

Circuit design

Air controls add versatility to production machine, G. D. Burhop, **May 80**

Automatic airlock dumps glass particles, R. Wehr, **Sep 90**

Beware of resonance, J. Wajcfeld, **Feb 62**

Bidirectional pump simplifies circuitry of hydraulic walking beam conveyor, L. B. Schilling, **Jun 55**

Bleed-off circuit synchronizes two cylinders, T. McDuffie and M. Tarary, **Jun 68**

Cams and solenoid valves program tool changer, T. Piotrowski, **Nov 60**

Centering system stops scrap, R. M. Cheng and A. E. Fahim, **Dec 63**

Cylinder speed synchronization, T. K. Virvalo, **Dec 55**

Damping high-pressure low-flow energy instantaneously, M. I. Korytko, **Apr 55**

Designing logic circuit with Karnaugh maps, S. C. Tsai, **Jul I-12**

Designing with and adapting pneumatic components to the undersea environment, F. H. Middleton, **Nov 66**

Hydraulic hybrid vehicle drive, J. Svoboda, C. K. Kwok, and R. M. H. Cheng, **Nov I-16**

Manifold simplifies pneumatic engine control on giant ore boat, W. C. Sjolund, **Feb 51**

Modified open-center system gives mine drill automatic two-speed operation and overspeed control, R. R. LaPointe, **Oct 150**

Pilot-operated relief valve brakes vehicle by varying pump load-pressure, J. D. Hale, **Nov 64**

Planning and piping a plant pneumatic system, N. R. Stull, **May 82**

Proportional pilot valves control all hydraulic crane, W. S. Bortkiewicz, **Dec 51**

Sequencing control circuits with time charts, S. C. Tsai, Y. C. Ho, and K. G. Lim, **Dec 58**

Servo system controls actuation of hydraulic, high speed, can-making press, D. H. Anderson, **Sep 79**

Worth repeating—designing with fluid power: present conditions, and future challenges and opportunities, R. S. Frank
- Part 1, **Jan 244**
- Part 2, **Mar 126**

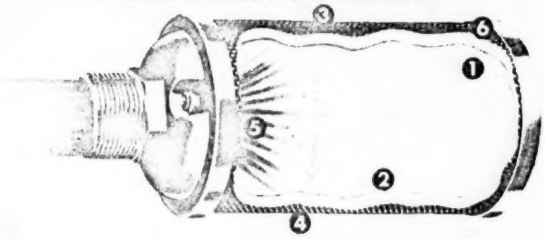
STOP NOISE
BEFORE IT STARTS!
with the ALLIED WITAN ATOMUFFLER
DESIGN for Noise Control



1. *Noise cancelled by interposing sound waves.*
2. *Multiple stage velocity deceleration.*
3. *Disseminator completely dissipates harmful exhaust blast.*
4. *Radial full-flow design.*
5. *Obstruction free expansion chamber.*
6. *Capacious peripheral exhaust surface diffuses air blast, lowers velocity and reduces noise.*

Unique muffler designs for cylinders, motors, valves, tools, vacuum pumps, and air operated devices. The basic design of the Atomuffler kills the air exhaust blast that causes it – preventing the roar of air exhaust noise before it starts. The air stream literally destroys itself by dividing and turning it back upon itself. Ask for the Allied Witan Noise Control Directory.

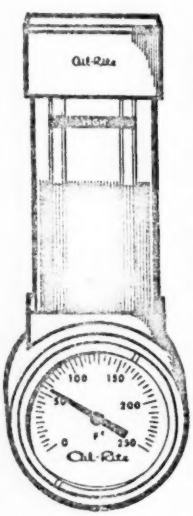
Flush liquid level gages
for distant viewing



Used on tanks to visually check liquid level and temperature from a distance. The shatterproof, transparent sight, suitable for temperature up to 220°F., holds a 1½" wide column of liquid. A 2" thermometer is built into the gage body and can be removed without draining the tank.

Internal tie rods hold the sight and seals to enclosures in a tamperproof construction. A white reflector increases visibility. High-Low level marks, 3" to 20" apart, are located inside the sight.

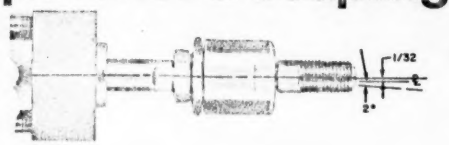
tom thumb self-aligning piston rod coupling



- Eliminates expensive precision machining for mounting fixed or rigid cylinder on guide or slide applications.
- Increases cylinder efficiency by eliminating friction caused by misalignment.
- Compensates for 2° angular error and 1/32 lateral misalignment on push and pull stroke.
- Greater Reliability—Reduces cylinder and component wear.
- Applicable on 1/2-28 thru 3/4-16 rod threads.

Write or call for prices and engineering data.

Rotoram Valves

with exclusive patented design . . . for millions of trouble-free actuations . . .

- Low silhouette mounting
- 2024 T4 aluminum bar stock
- Rust-resistant
- Full flow air passages
- Piped exhaust ports
- Interchangeable parts
- Anodized finish

Rotoram Valves are available in 3 and 4-way models for 1/8", 1/4", 3/8" and 1/2" pipe sizes. Special Block "V" Packing permits free ram movement, insures long valve life. Port entry from either left or right side. Ask your AIR-MITE Distributor, or write for complete details and illustrated catalog.

REALLY TOUGH

Full-flow ball valve works at pressures to 7250 psi. See that wide-open, smooth bore, assuring maximum flow. And the extra-long handle makes operation easy even against pressures up to 7250 psi.

The ball itself is heavily chrome-plated, mating with a pressure-balanced full-cup seal of either MoS_2-lubricated polyacetal, Viton, or Teflon.

When handle is removed, guide washer can be snapped closed for a positive lock in either "on" or "off" position.

Nine NPT port sizes from ¼" to 2½". All-stainless-steel models and interlock switches available. Call (215) 868-3100 or write Hycon Corp., Lehigh Valley Industrial Park, Bethlehem, PA 18017; Telex 84-7328.

Parker "4510" (¼", ⅜") and "4530" (½", ¾") Air Control Valves provide a subbase and a manifold which conforms to the new I.S.O. standard for mounting air valves. The "4510" and "4530" Valves mark the beginning of worldwide air valve interchangeability.

Contact your local Parker Pneumatic distributor for more information on this dramatic new development in Air Control Valves.
